

SARITA GLOBAL

BOPP / Polypropylene Film-Grade Granules

Product Brief • General information for enquiry and sourcing

Overview

BOPP means biaxially oriented polypropylene film. Polypropylene resin is the feedstock used by film producers; it is not itself a finished BOPP film. We can discuss suitable PP grades for film-related conversion requirements, subject to availability and technical confirmation.

Typical application areas

- Packaging film production feedstock
- Flexible packaging conversion
- Label and lamination film supply chains
- Industrial film applications, subject to grade

Identification & documentation

Product: BOPP / Polypropylene Film-Grade Granules

CAS / identification: Not applicable — polymer resin

Grade, origin, packaging and availability: confirm with Sarita Global at the time of enquiry.

Request the current supplier TDS and SDS for the specific offered grade.

Important notice

“BOPP granules” is a commercial shorthand; request the exact polypropylene grade, MFI, density, additives and intended processing method before purchase. This brief is for general information only. It is not a technical data sheet, safety data sheet, compliance certificate, guarantee of performance or offer to sell. Confirm the actual product grade and suitability with the supplier before use.
