

SARITA GLOBAL

Diethyl Phthalate (DEP)

Product Brief • General information for enquiry and sourcing

Overview

DEP is a traditional plasticizer used to improve flexibility and processability in compatible PVC formulations. Selection depends on the intended end use, local regulatory requirements, and the supplier's current technical and safety documentation.

Typical application areas

- Flexible PVC compounds
- Cable and hose compounds
- Synthetic leather and coated fabrics
- Tarpaulins and industrial materials

Identification & documentation

Product: Diethyl Phthalate (DEP)

CAS / identification: 117-81-7

Grade, origin, packaging and availability: confirm with Sarita Global at the time of enquiry.

Request the current supplier TDS and SDS for the specific offered grade.

Important notice

DEP may be subject to restrictions for certain uses and jurisdictions. Confirm permitted end use, compliance requirements, and batch-specific TDS/SDS before ordering. This brief is for general information only. It is not a technical data sheet, safety data sheet, compliance certificate, guarantee of performance or offer to sell. Confirm the actual product grade and suitability with the supplier before use.
