

SARITA GLOBAL

Diethyl Terephthalate (DOTP)

Product Brief • General information for enquiry and sourcing

Overview

DOTP (also known as DEHT) is a plasticizer used to impart flexibility to PVC. It is often considered where a non-ortho-phthalate plasticizer is specified. Final suitability depends on formulation, regulations and technical documentation.

Typical application areas

- Flexible PVC flooring and wall coverings
- Wire and cable compounds
- Coated fabrics and synthetic leather
- PVC hoses, mats and industrial articles

Identification & documentation

Product: Diethyl Terephthalate (DOTP)

CAS / identification: 6422-86-2

Grade, origin, packaging and availability: confirm with Sarita Global at the time of enquiry.

Request the current supplier TDS and SDS for the specific offered grade.

Important notice

Do not assume a grade is suitable for food, medical, toy or other regulated contact applications without written confirmation and relevant compliance documentation. This brief is for general information only. It is not a technical data sheet, safety data sheet, compliance certificate, guarantee of performance or offer to sell. Confirm the actual product grade and suitability with the supplier before use.
